High resolution profile cutting machine...

I don't have the blank key, so I can't do it! :(

This is not a valid reason anymore with X-Cut. Do you want a mini key factory in your workplace?

You can produce a new blank key and copy your customer's key even if it is not in your stock with X-Cut. Besides that you can complete this copying process in a few minutes. Take your place in professionals.

■ X-Cut's clamp has three different places that designed for the keys, which have different structures. You can use these places to read several keys. X-Cut has a specially designed system that reads both sides of the key in once even if it has so thin channels with its nanotech reading probes.

■ The user interface of the X-Cut is designed for easy use and quick processes with integrated graphical lcd and capacitive touch buttons. The interface that named as "Step by Step" is user friendly and designed to prevent possible user mistakes.

■ X-Cut has a strong and stable motor for cutting highly sensitive profiles. The cutter has an improved structure that maximizes the number of total copy and the surface quality of cut key. The cutting area is illuminated by nature-friendly led technology.

■ The shield, which is placed on cutting area, is moved by machine automatically. This offers you speed and conveniences. The shavings that are being produced during cutting will be directed to shavings container which is placed under the cutting section.
