TDB011 VW AUDI SEAT SKODA FORCED IGNITION CABLE

The TDB011 VW, Audi, Seat and Skoda has the ability to force the ignition on without an ignition key, the TDB011 also tests the OBD socket wiring for power and faults and has a convenient LED to help with socket location when light is low or at night.

Plug the TDB011 into the OBD, check the lights on the device to ensure the wiring is all correct and the OBD port has power and ground connections.

Once the wiring has been checked, the TDB011 makes it possible to force the ignition on (Terminal 15) on VW, Audi, Seat and Skoda vehicles from the OBD diagnostic port.

This will allow you to wake up the control unit on the vehicle and establish communication without a key.

It is fitted with an OBD male port at one end and a female port at the other, and enables you to continue to use the diagnostics without having to unplug the unit.

TDB011 Specification

Length :	100 cm
Internal battery :	Rechargeable
Connections :	Male and Female OBDII
Switch :	Touch sensitive ignition operation
Switch :	Touch sensitive LED torch
